

3. SUPPORTING MATERIALS

3.2 Workflow Diagrams

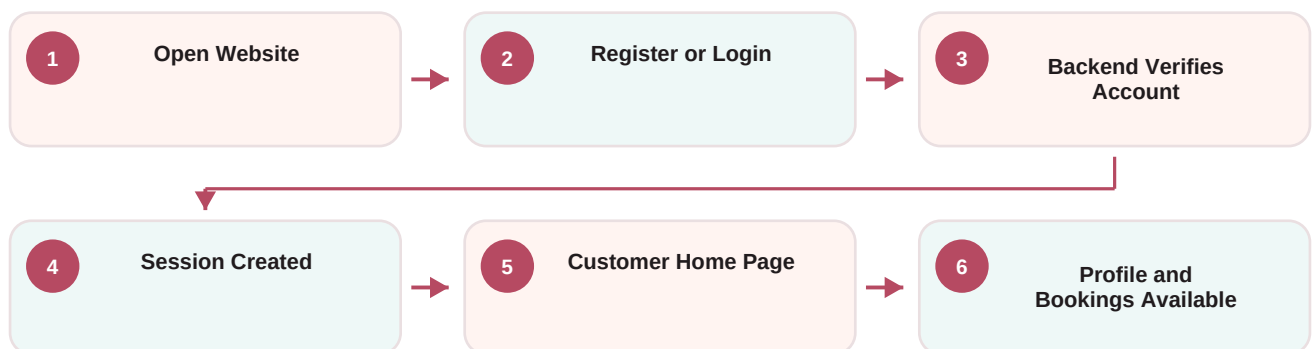

Supporting materials help in understanding how the Glow & Grace Salon appointment booking system works visually and practically. This section includes workflow diagrams for the customer website, admin panel, payment handling, review management, and live backend database flow.

3.2.1 Customer Account and Login Flow

This flow shows how a customer enters the website, creates or accesses an account, and reaches the customer side of the system.

Flow Representation:

Open Website -> Register or Login -> Backend Verifies Account -> Session Created -> Customer Home Page -> Profile and Bookings Available

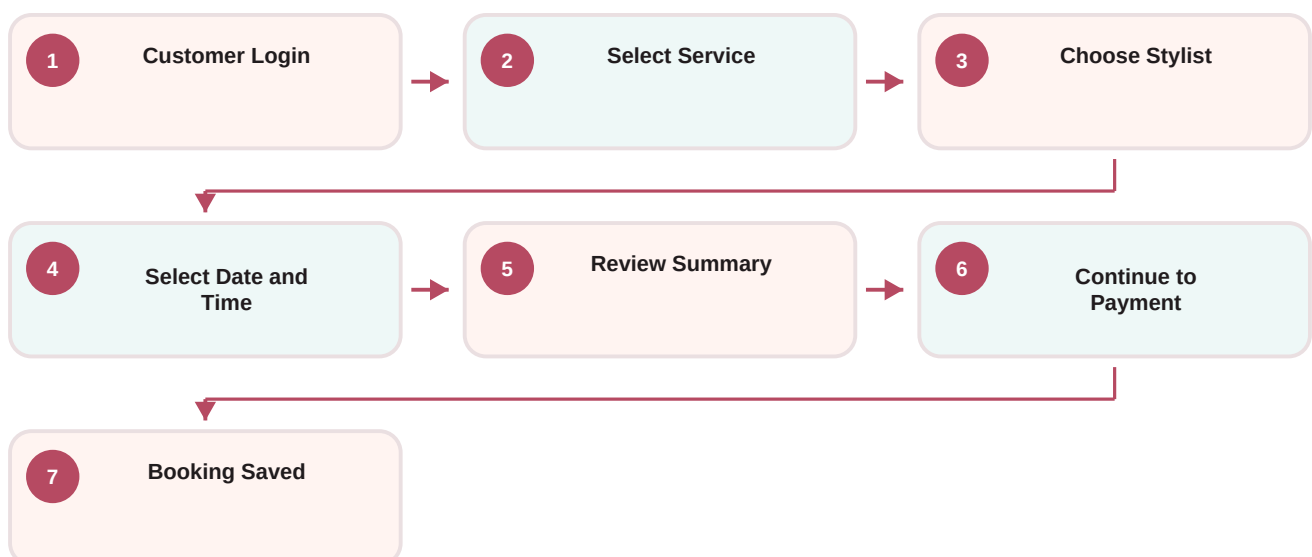

3.2.2 Customer Appointment Booking Flow

This flow explains how a logged-in customer books a salon appointment from service selection to final booking storage.

Flow Representation:

Customer Login -> Select Service -> Choose Stylist -> Select Date and Time -> Review Summary -> Continue to Payment -> Booking Saved

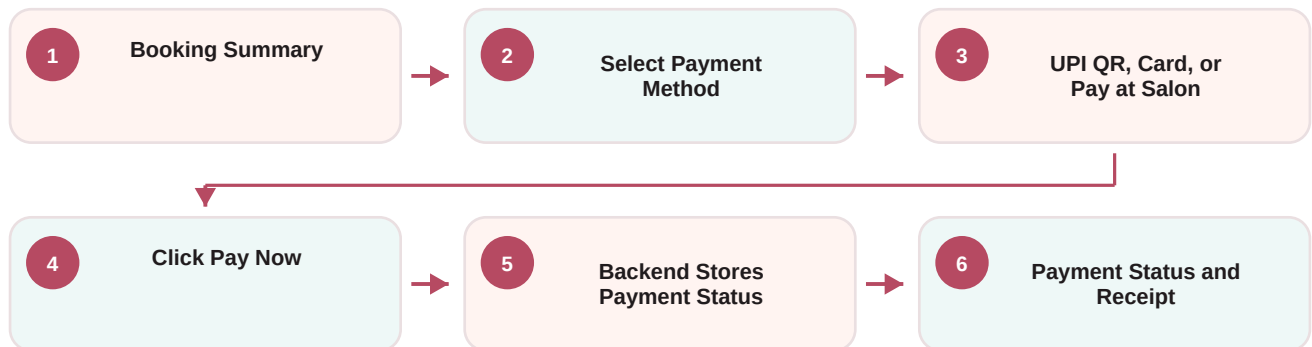

3.2.3 Payment Processing Flow

This flow shows how payment information is handled and how the payment status page displays receipt details after payment.

Flow Representation:

Booking Summary -> Select Payment Method -> UPI QR, Card, or Pay at Salon -> Click Pay Now -> Backend Stores Payment Status -> Payment Status and Receipt

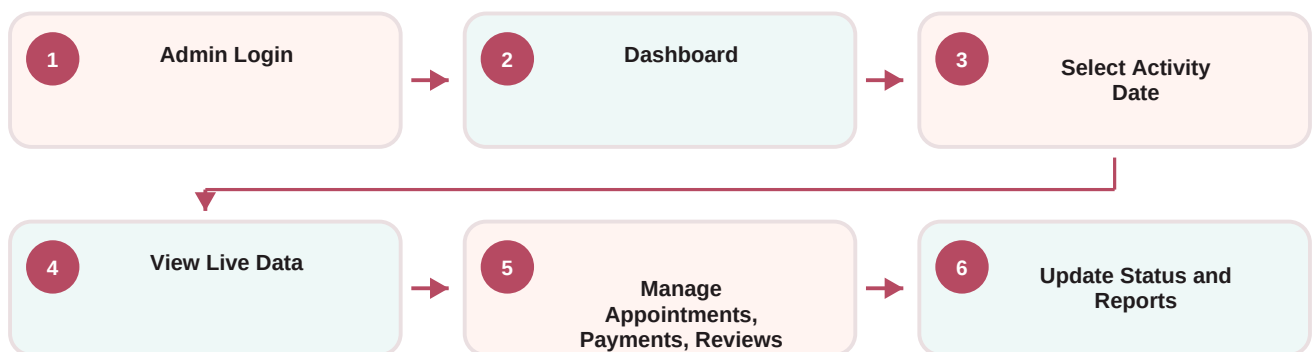

3.2.4 Admin Management Flow

This flow describes the admin side where salon staff monitor daily data, update appointment/payment status, and review reports.

Flow Representation:

Admin Login -> Dashboard -> Select Activity Date -> View Live Data -> Manage Appointments, Payments, Reviews -> Update Status and Reports

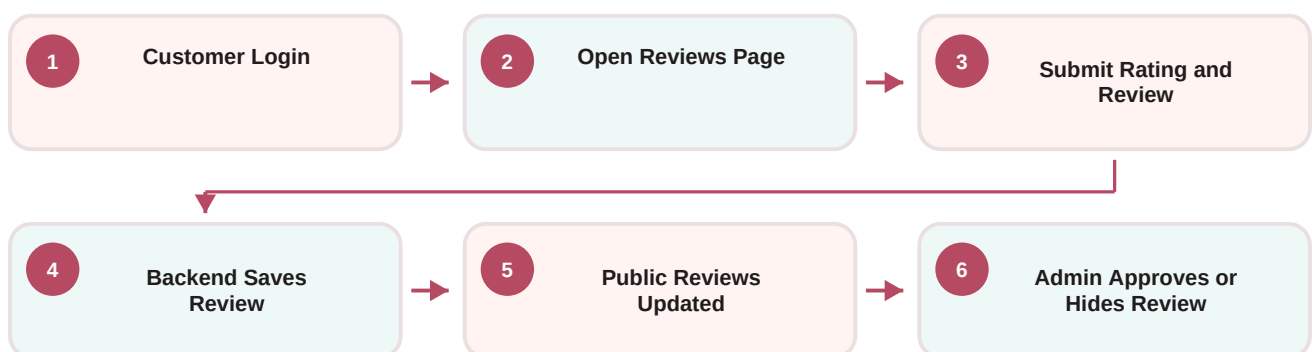

3.2.5 Review Management Flow

This flow shows how customer reviews are submitted, stored, displayed publicly, and controlled from the admin panel.

Flow Representation:

Customer Login -> Open Reviews Page -> Submit Rating and Review -> Backend Saves Review -> Public Reviews Updated -> Admin Approves or Hides Review

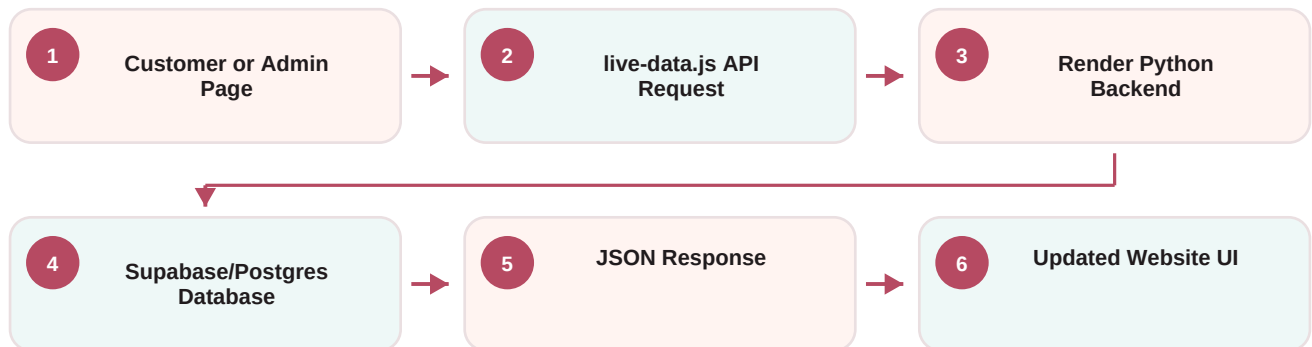

3.2.6 Live Data and Database Flow

This flow explains how frontend pages communicate with the hosted backend and live database for appointments, payments, and reviews.

Flow Representation:

Customer or Admin Page -> live-data.js API Request -> Render Python Backend -> Supabase/Postgres Database -> JSON Response -> Updated Website UI

3.3 System Workflow Explanation

The system works in a step-by-step process. Customers register or login using email/mobile and password, book appointments, continue to payment, and view appointments and receipts from their account. Admin users login through the admin section, select an activity date, view live appointment and payment data, update statuses, manage reviews, and monitor reports. The frontend uses live-data.js to send requests to the Python backend hosted on Render, and the backend stores live appointments, payments, reviews, accounts, and sessions in the Supabase/Postgres database.
